

Integrated LRN-Based Student Progression Tracking System

Workflow:

Scope

The Integrated LRN-Based Student Progression Tracking System is designed to automate and centralize the tracking of junior high school students from Grade 7 to Grade 10 using the 12-digit Learner Reference Number (LRN) as the primary identifier.

The system covers the following functionalities:

- Uploading and processing LIS Excel exports
- Centralized student record management
- LRN-based cohort tracking
- Monitoring transfer-in and transfer-out students
- Automatic computation of:
 - Cohort Survival Rate
 - Completion Rate
 - Retention Rate
 - Repetition Rate
- Generation of formatted Excel reports
- User authentication and access control

The entire system is only being used by a single person which is the head of the department.

Limitations

The system does not:

- Directly connect to the national LIS database API
- Replace the official LIS system
- Support elementary or senior high school records
- Support online student enrollment
- Provide parent/student portals
- Handle grading systems or attendance monitoring

The system only processes uploaded LIS Excel files provided by authorized school personnel.

System Functionalities

A. Authentication Module

Features

- User login/logout
- Password encryption
- Role-based access control

Purpose

Ensures only authorized personnel can access the system.

B. LIS Data Upload Module

Features

- Upload Excel files
- Validate file format
- Extract student information
- Detect duplicate LRNs

Purpose

Allows automated importing of student data from the national LIS exports.

C. Student Record Management Module

Features

- Add student records
- Edit student information
- Search/filter students
- View student history

Purpose

Centralizes student records for easier monitoring.

D. Cohort Tracking Module

Features

- Track student progression from Grade 7–10
- Identify straight-path students
- Detect transfer-ins and transfer-outs
- Detect dropped or repeating students

Purpose

Automates cohort monitoring and progression analysis.

E. Computation Engine Module

Features

- Automatic formula computation
- Cohort survival calculation
- Completion rate calculation
- Retention rate calculation
- Repetition rate calculation

Purpose

Reduces manual computations and improves accuracy.

F. Reporting Module

Features

- Generate reports by school year
- Export reports to Excel
- Print formatted reports

Purpose

Provides administrative-ready reports for decision-making and submission.
